Experiment 10

AIM: Develop a Laravel/Django based web application

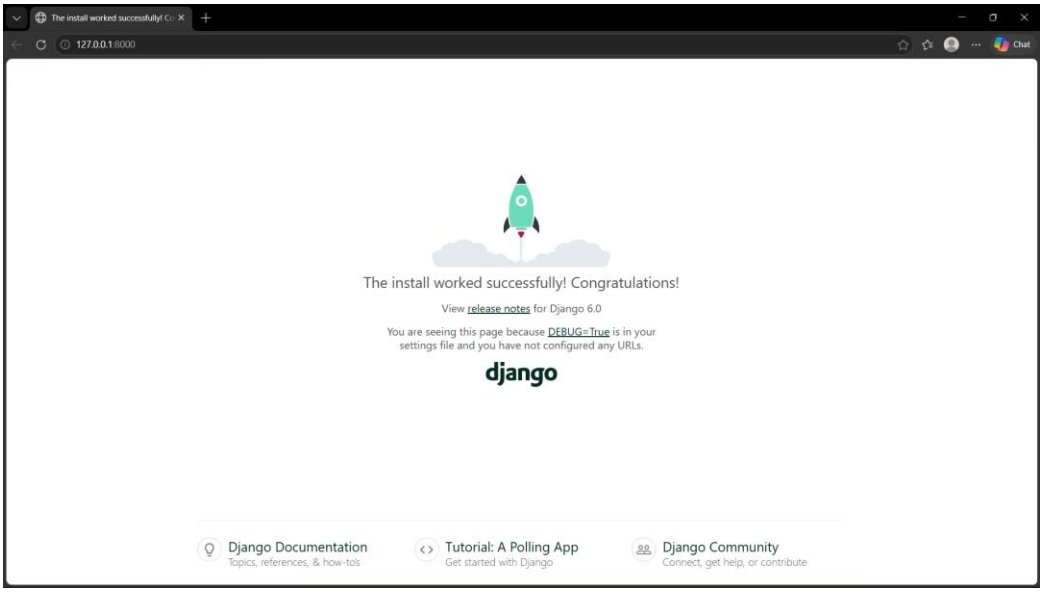
1. Open VS Code -> Terminal -> New Terminal

2. Create New Project
   python -m django startproject myproject or django-admin startproject myproject
   cd myproject
   pip install Django

```
PS C:\Users\RAJNISH> python -m django startproject myproject
PS C:\Users\RAJNISH> cd .\myproject\
PS C:\Users\RAJNISH\myproject> pip install django
Requirement already satisfied: django in c:\users\rajnish\appdata\local\programs\python\python314\lib\site-packages (6.0.3)
Requirement already satisfied: asgiref>=3.9.1 in c:\users\rajnish\appdata\local\programs\python\python314\lib\site-packages (from django) (3.11.1)
Requirement already satisfied: sqlparse>=0.5.0 in c:\users\rajnish\appdata\local\programs\python\python314\lib\site-packages (from django) (0.5.5)
Requirement already satisfied: tzdata in c:\users\rajnish\appdata\local\programs\python\python314\lib\site-packages (from django) (2026.1)

[notice] A new release of pip is available: 25.3 -> 26.0.1
[notice] To update, run: python.exe -m pip install --upgrade pip
PS C:\Users\RAJNISH\myproject>
```

3. Run Server (First Test)
   python manage.py runserver
   Open browser:
   http://127.0.0.1:8000/



4. Create Simple App
   python manage.py startapp myapp

5. Register App
   Open: myproject/settings.py and include the below code
```
INSTALLED_APPS = [
    'django.contrib.admin',
    'django.contrib.auth',
    'django.contrib.contenttypes',
    'django.contrib.sessions',
    'django.contrib.messages',
    'django.contrib.staticfiles',
    'myapp', # your app
]
```

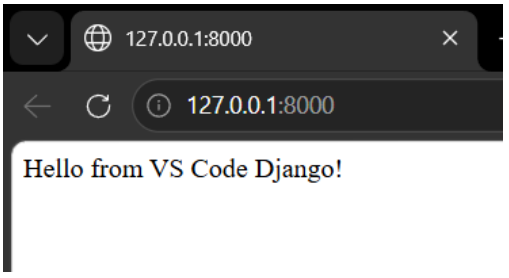
6. Create Simple View
   Open: myapp/views.py and include below code
```
from django.http import HttpResponse
def home(request):
    return HttpResponse("Hello from VS Code Django!")
```

7. Create URL File
   Create file: myapp/urls.py and include below code
```
from django.urls import path

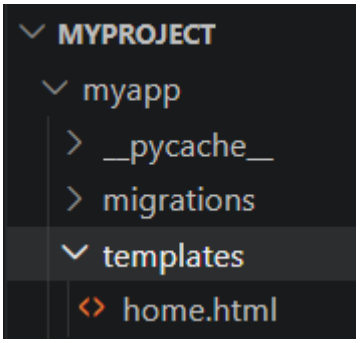
from . import views
urlpatterns = [
path('', views.home),

]
```
8. Connect URLs
   Open: myproject/urls.py include below code
```
from django.contrib import admin
from django.urls import path, include
urlpatterns = [
path('', include('myapp.urls')),
path('admin/', admin.site.urls),
]
```

9. Run
   python manage.py runserver
   Open:
   http://127.0.0.1:8000/
   Output:



To add GUI:
1. Create Template Folder
Inside myapp, create:

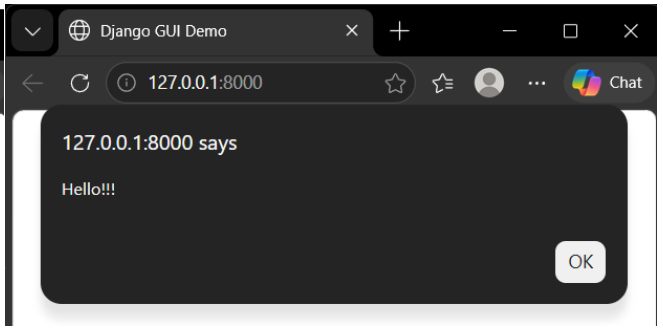


2. Add the below GUI Code

```
<!DOCTYPE html>

<html>
<head>
<title>Django GUI Demo</title>
</head>
<body style="font-family: Arial; text-align: center;">
<h1 style="color: blue;">Welcome to Django GUI</h1>
<p>This is a simple interface created using HTML</p>
<button onclick="alert('Hello!!!')">
Click Me
</button>
</body>
</html>
```

3. Update views.py
Open: myapp/views.py and include below code

```
from django.shortcuts import render
def home(request):
return render(request, 'home.html')
```


4. Run Server
python manage.py runserver
